

Go to the techspacelearning.org website.

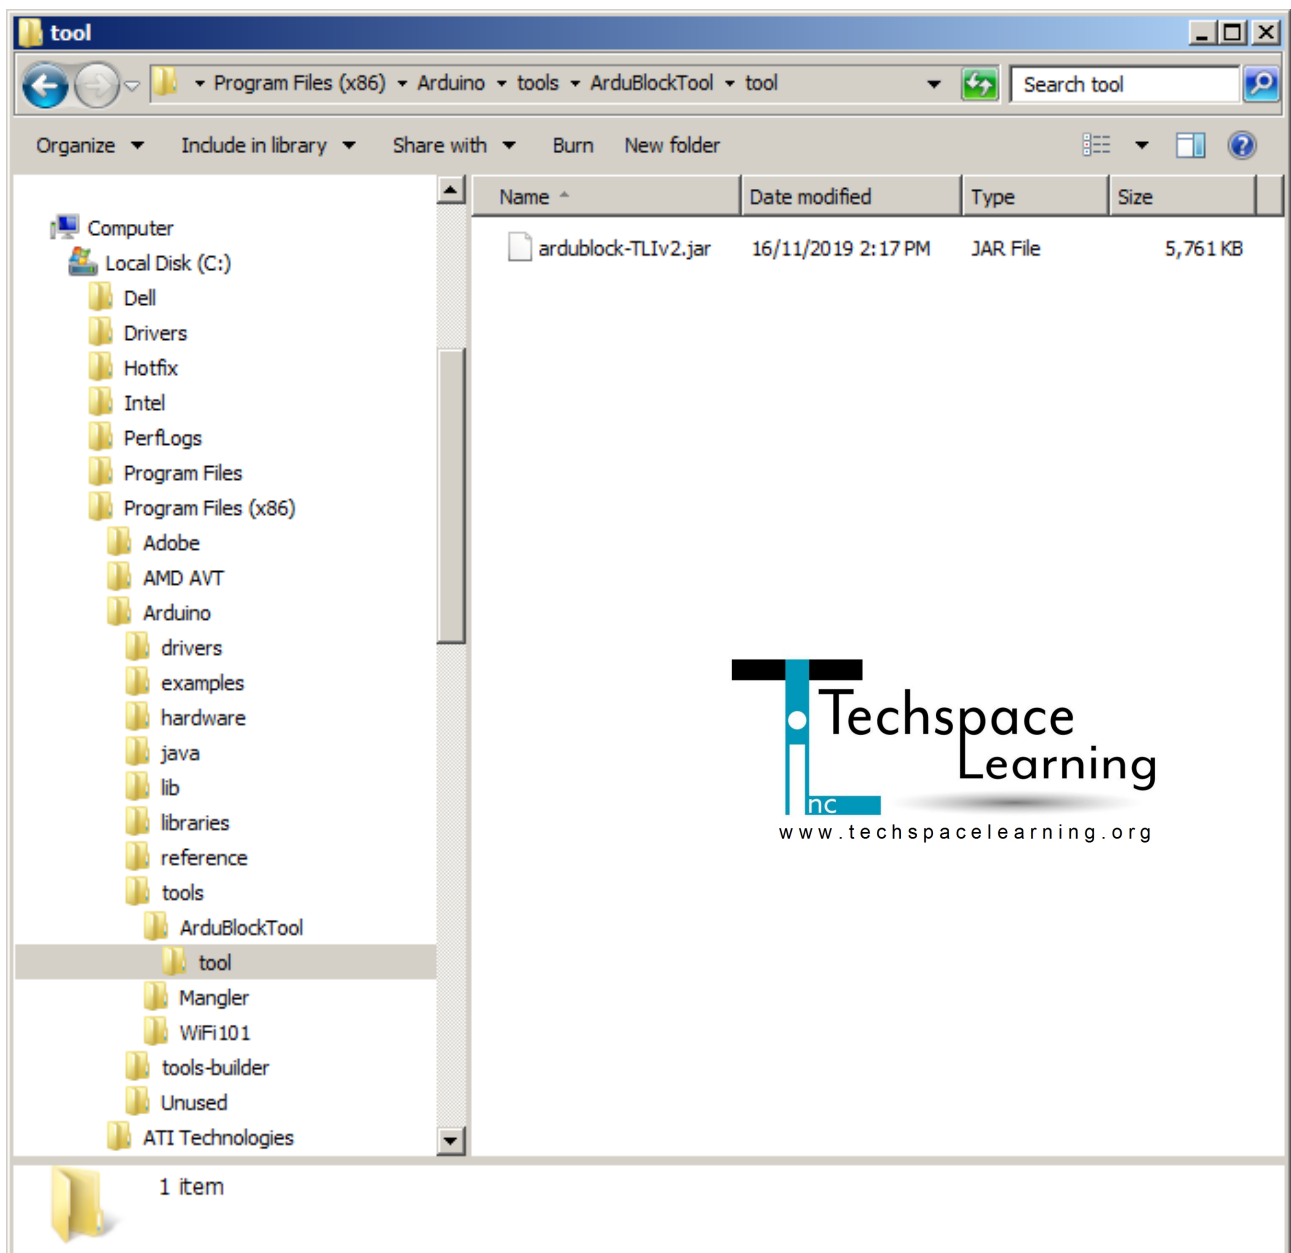

Go to the Resources page.

(If you have a version of the Arduino IDE already on your computer, then skip this step.)

Install the Arduino IDE.

Once the Arduino IDE is on your computer, download the ArduBlock V2 folder. It should appear as a folder named ArduBlockTool in your downloads folder.

The whole folder then needs to be placed in the folders as indicated below.

You should now be able to start the Arduino program and find the ArduBlock program in the Tools tab.
